- Altenhain (E-41) Ammunition Depot is located some six kilometers south of Türzen and directly SE of Francis Airfield. The roads leading to the dump come from Altenhain and Trebsen and meet in a triangle about one and a half kilometers east of Altenhain. North of this triangle is the entrance to the dump, with the entrance to the dump proper via the administration compound, which consists of one administration building and two buildings housing the armorer's shop.
- Apart from the main entrance, through which all personnel must enter, the dump disposes of three emergency entrances, one each on the north, west, and south sides. The whole dump is bound by a fence, which is encircled by a ten meter wide strip of wood in which the Soviet army troops attached to the cump are quartered. Facircling the dump outside the wood, the country-side has been cleared of trees and bushes for 100 meters.
- North of Altenhain a branch line leaves the railway and runs into the dump in the SW corner. Within the dump itself a narrow-gauge railway also serves some of the groups of bunkers, while the remainder and the sheds are connected by roads.
- The Commandant of the dump is a Lt. Colonel who lives in Altenhain with his family. His deputy is Captain Roman Soshenkov. The dump comes under the command of Weimar, and all officers when posted first have to report to Weimar.
- a total of 250 Germans, both men and women, are employed in this dump and are divided into three working parties as follows:

arbeitskommando altenburg: Cora : 60 Armorer's Shop : 50

The two Arbeitskommandos tend and store the ammunition, while the armorer's shop repairs equipments of all kinds, but orimarily guns. The loading of armunition both outside and inside the dump is done exclusively by Soviet army Groops, who wear black shoulder-boards with red piping.

...

6. Twenty-five to thirty railroad cars carrying amounttion and explosives arrive in the dump weekly. Every four weeks fifteen to twenty trucks arrive with their drivers from Weimar for transport duties in the depot area. These troops wear black epaulettes with crossed num-barrels.

50X1-HUM

7. The Bunker Map (Attachment 3) shows the lay-out of the depot. In point of fact, the bunkers are not quite as evenly spaced as the sketch suggests. The question marks are self-explanatory. Full details of the bunkers and storage sheds are as follows:

Bunkers 1 - 9

Contain artillery amounition (Pitronenmunition), each projectile weighing 24 kgs and having an overall length of 73 cm. These shells are solid shot with no fuse limiter and are piled one on top of the other without any Schutzkorb.

Funkers 10 - 33

Contain heavy artillery armunition (Patronenmunition), each projectile weighing 62 kgs.

Bunkers 34 - 59

50X1-HUM

Contain anti-tank amountion, each projectile having an overall length of 72 cm. and a caliber of approximately 120 mm. The fuse igniter head is black.

The fuse igniter itself is screwed on to the shell and projects 2 mm over the side of the shell. The shell-base has three Gasdurchtrittslöcher (gas escape apertures).

<u> Bunkers 60 - 92</u>

Contain heavy artillery ammunition, each projectile having an overall length of 63 cm, weighing 62 kgs and being packed in Körben. The caliber is about 210 mm (This description also covers ammunition in Eunkers 10 - 33).

Bunkers 93 - 101

Contain 160 mm morter adminition (see attachment I). The fuse igniters are either vellow or blue in color. The tail fin component is fitted to the bomb by a bayonet joint.

Bunkers 102 - 119

Contain artillery amountion of the same type as in Bunkers 1 - 9, Punkers 102 - 119 are organized into three groups: Bunkers 102 - 107, Bunkers 103 - 110, and Bunkers 111 - 119. All are three times as large as the other bunkers and each has three entrances.

Sheds I - V (All sheds measure 10 m long x 5 m wide x 3 m high).

Contain guns which can fire the ammunition stored in Bunkers 1-9 and 1.01-119. The equipments are guns with barrel length of over 5 meters and howitzers with barrel length of about 3.60 meters.

Sheds VI - X

Contain high explosives of the following types:

- a. Blättehensprengstoffe (leaf explosive) with each side 8 mm long and looking like a rhomboid. A single Blättchen is 2 mm thick.
- b. Stangensprengstoffe (stick explosive) one meter long and 1.5 cm in diameter.
- c. Dark black powder.
